Step 1: Go to Medicare.gov and click “log in” in the upper right-hand corner of the web page.

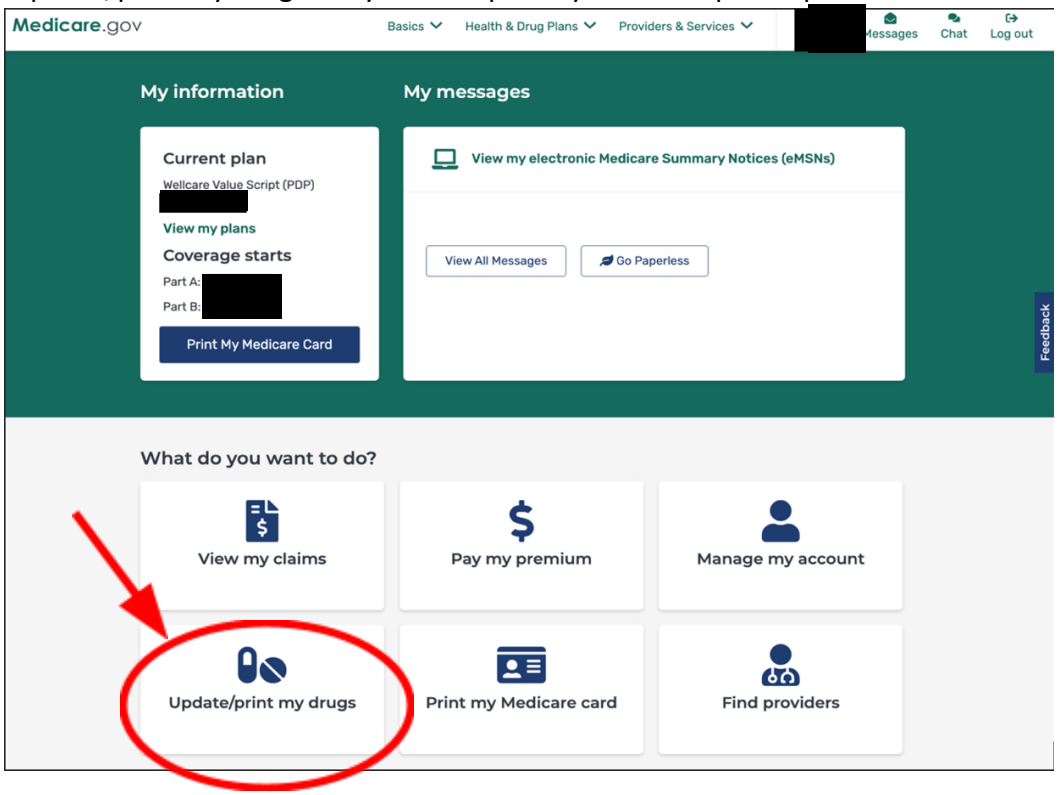

If you have NOT created an account of your own in Medicare.gov, here is how you can do that (and you should): HOW TO CREATE

Step 2: Enter the username and password you created and click “log in”

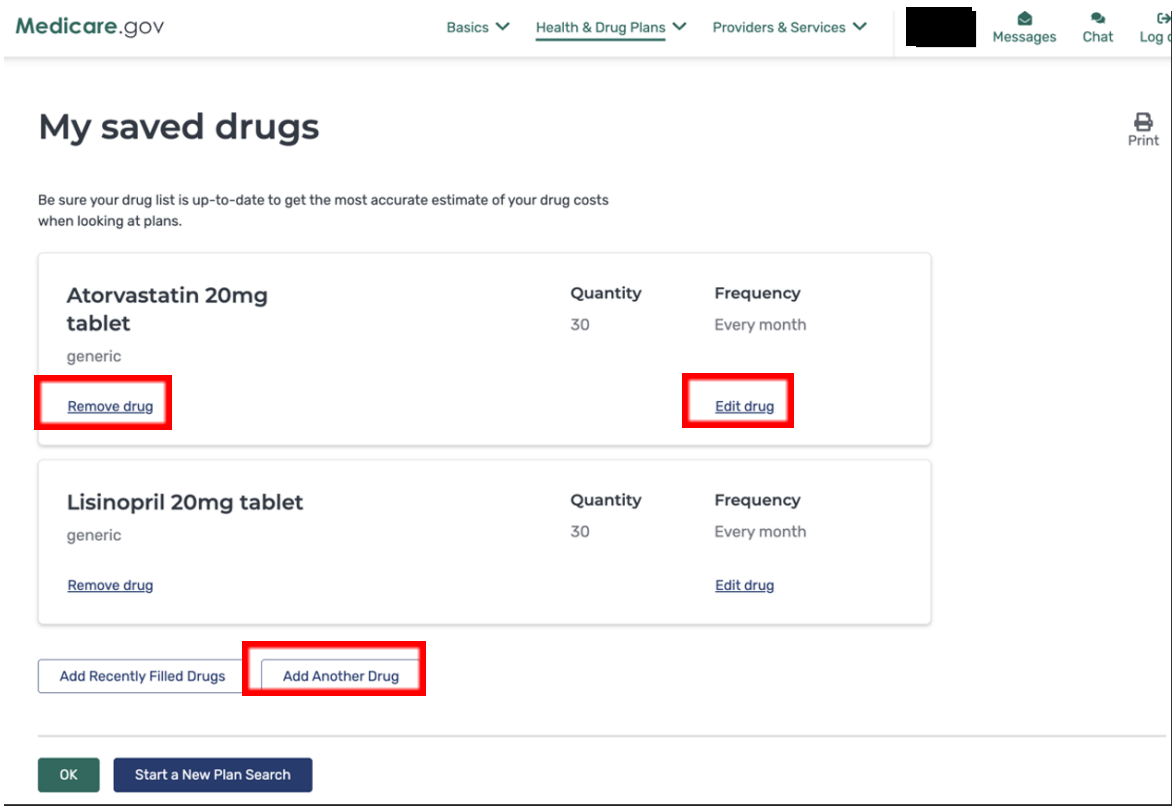

Step 3: Once you are in your personal Medicare.gov portal, click on the box that says “update/print my drugs” so you can update your list of prescription medications.

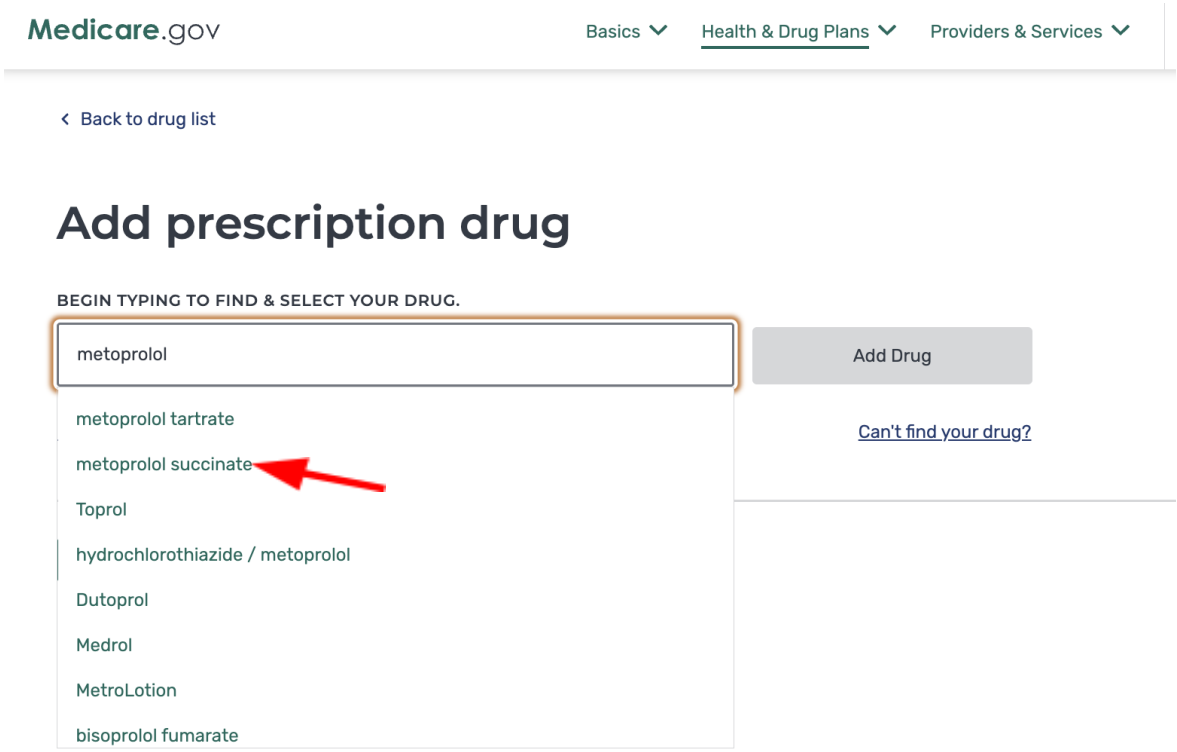

Step 4: If you have already filled prescriptions using your Part D plan, you may find that your medications are already listed on the page. If you need to remove a medication from the list, just click “remove drug”. If you must change the dosage or frequency of a medication already on the list (example: changing Atorvastatin from 20 mg to 40 mg) you can do this by clicking on where it says, “edit drug”.

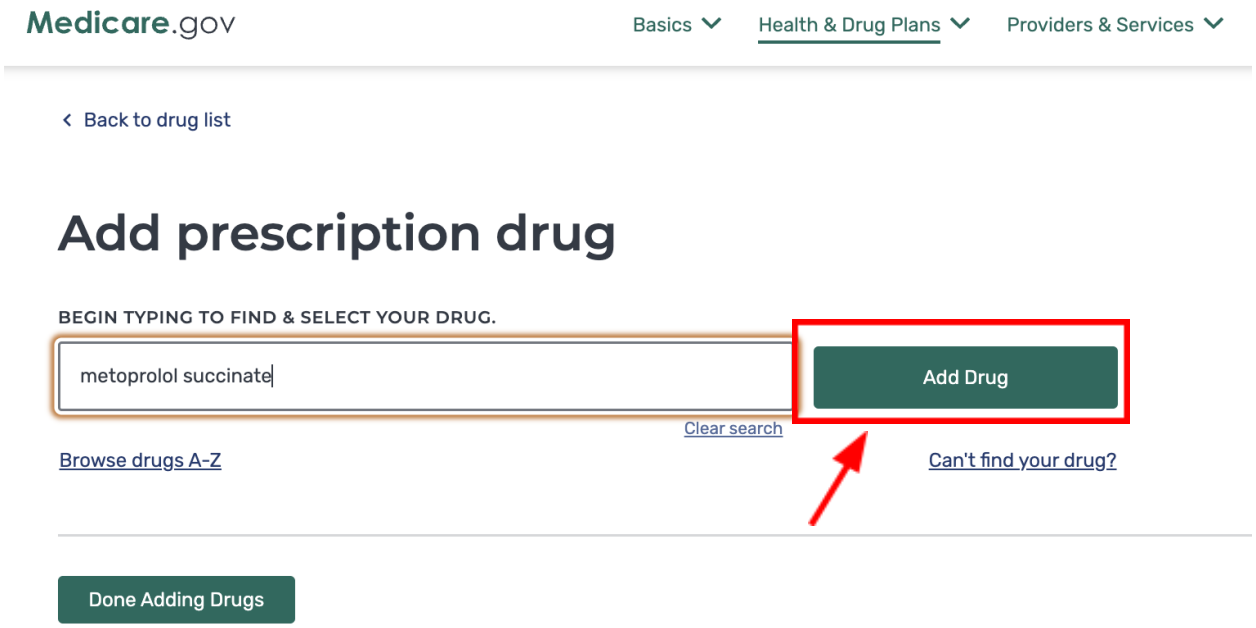

Lastly, if you need to add new medications to your list of prescriptions, click the button that says, “add another drug” and then go to step 5 of this document. If your medication list is fully up to date and accurate, just click the green “ok” button.

Step 5: Type in the name of the medication you want to add to your list. Make sure you choose the exact name of the prescription you want to add using the drop-down options.

Step 6: After selecting the name of your prescription, click the green “add drug” button

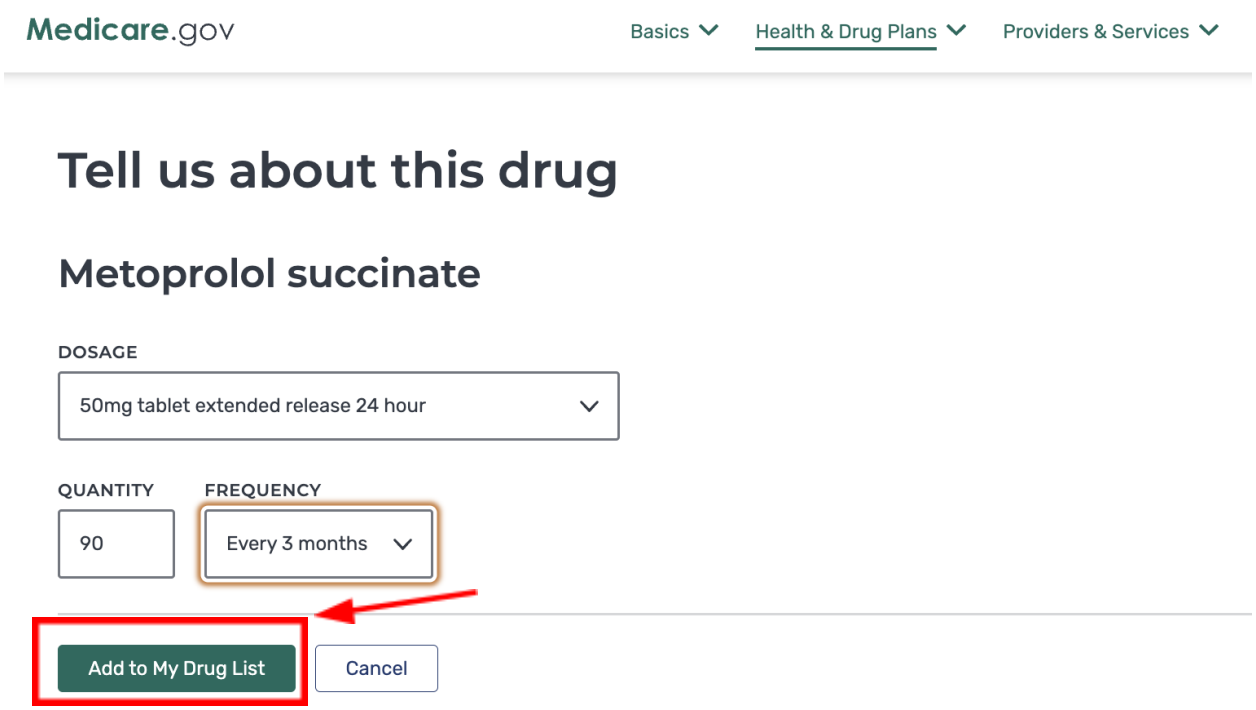

Step 7: Make sure you select the exact dosage, quantity and frequency for the specific medication you want to add to your list. For example, if your medication is 25 mg, select that for the dosage (or 50 mg like in the example below).

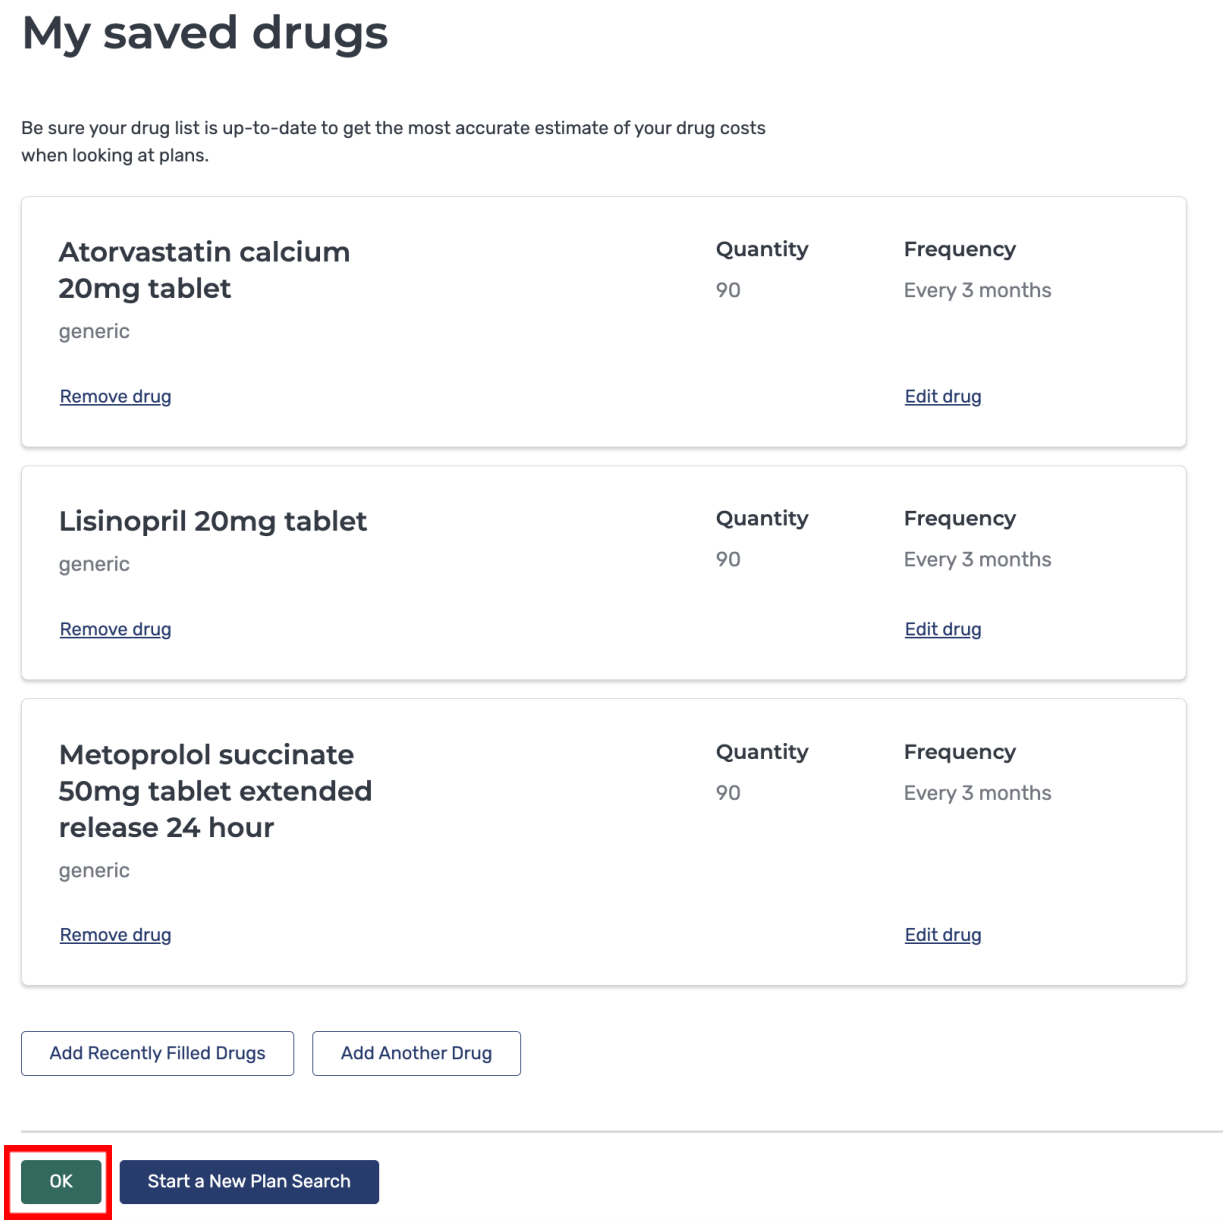

For the quantity and frequency make sure you enter the numbers that fit your prescription. For example, if you have a medication you take once per day and you get a 30-day supply, you will enter 30 for the quantity and every one month for the frequency.

In the example below, this is a medication that is taken once per day, but is filled at the pharmacy every 90 days.

Lastly, click on the green “add to my drug list” button when your medication details are accurate.

Step 8: Continue to add prescriptions to your list until you have added all the medications you take on a regular basis and want to include in your analysis. Click “OK” when you are done adding medications to your list.

Step 9: Finally, click the green “done adding drugs” button and your list will be fully updated in your Medicare.gov account.

To view your updated list of prescription medications please go back and follow the step in Step 3 of this document.
